Environmental SMS Notification System for Data Centres, IT Rooms & Racks

Instant notification of critical IT environments is vital to any successful business continuity strategy. swiftAIR provides an immediate and efficient method of almost instant notification of high temperature, power presence and a whole variety of other status conditions including water leaks, smoke, UPS, generators, access and security.

swiftAIR is a GSM network device that can be monitored via the cellular network. High and low critical/warning thresholds may be set to ensure instant notification of power supply failure and other potentially disastrous environmental problems.

swiftAIR is the ultimate method to providing instant warning of potentially catastrophic conditions that may be developing in critical environments. Configuration can quickly be carried out, remotely via and authorised (password) cellular phone or direct link with USB cable interface.

The swiftAIR's optional sA sensors are easily attached Directly to the swiftAIR unit without the need for additional external 12v power supplies.

Extra facilities such as scheduling and status reporting, make the swiftAIR just about the fastest remote environmental notification product of its kind.

Key Features

- Instant power/temperature/access notification across GSM network
- Provision to connect 4 x sA Sensors (power, water, smoke, security, etc And 4 x output controllers
- SMS instructions directly to swiftAIR (open door, lights on etc.)
- Quad band GSM/GPRS modem
- Status update via SMS request
- Remote SIM card management and re-charging
- Schedule facility to enable alerts to be sent only when required
- Supports up 500 cellular numbers
- Internal Power Supply – no external power for sA sensors
